

Inteo is the world's first and only hearing aid with the Audibility Extender... and patients are loving it!

Linear frequency transposition preserves temporal cues of original and transposed sounds.

■ Benefits:

- ◆ Increases the enjoyment of nature's sounds (e.g. bird songs) and music
 - ◆ Potential improvement of speech understanding in quiet*
- ## ■ Extreme fitting flexibility and specificity
- ◆ 10 start frequencies (from 630 Hz to 6000 Hz in 1/3 octave intervals)
 - ◆ +/- 14 dB of transposed gain
 - ◆ Two bandwidths (one and two octaves) of transposition
 - ◆ Can be used as the only program or as an optional listening program

- Ideal candidates are those with unaidable hearing in the high frequencies (such as a precipitously sloping hearing loss)
- Available in all styles of Inteo products (from CIC to BTE, including open-fit élan)
- Part of the Widex ISP family of products

* Improvement varies depending on age, degree of loss, motivation, appropriateness of chosen fitting parameters, and availability of training.
